Toad for Oracle

KONTRAX

Toad now has a single editor for working with SQL and PL/SQL objects.

Toad lets you apply grouping at the column level.

Most tools offer a single display model for objects in the database. Toad offers three!

With a touch of a single button, Toad can evaluate 60 different execution plans and identify a plan that takes the response time from 43 seconds down to 6 seconds.

Whether you want to continue investing in your traditional relational database infrastructure or decide to explore new database technologies, you can count on us to support your entire data environment with our latest tools.

You can now apply a visual color style to the data grids in Toad.

Toad for Oracle has more than a decade of feature development and investment behind it.

Use Optimize Indexes to analyze and improve indexes for a SQL workload or for any group of SQL statements.

Any copy of Toad can be upgraded to include advanced database object management features with the DB Admin Module.
